Experienced Frontend developer with over 2 year of experience building user-friendly, responsive and high-performance web applications, I like to stay up to date with the latest technologies to provide the best user experience for clients. Skilled with the most popular frameworks in javascript React-NextJs. My objective is to obtain a position that will allow me to utilize and apply my experiences to achieve any task or goal that is set ahead of me and I am confident that I have the skills to make a positive impact any projects.

SKILLS

HTML, CSS, Tailwind CSS, JavaScript, Node.js, Express, React.js, NextJs, React Redux, SQL, Sequelize, PostgreSQL, Firebase, AWS,

EXPERIENCE

React Developer

Jun 2022 -Nov 2022

soyHenry - (Remote)

Participated in a full-time immersive, 4-month software engineering, completing in-class projects, hackathons, and personal projects focused on real-world applications of full stack developer principles and best practices. Developed a portfolio of individually and collaboratively focused in-class projects, including:

- [Ecommerce](#): Collaborative team project created with Postgres, Express, React, Redux, Tailwind CSS and Node.js for an app that allows users to buy or sell any vehicle. I worked in the front doing the section of details, in this section if you are registered you can add/remove/edit your personal post also you can add/remove any item from favorites, leave comments, ask question, contact with the seller and leave any feedback. I made the form to post your vehicle implementing all the validations needed working with the backend team to make sure that all the data is working correctly.
- [Pokémon And Videogames APP](#): I made these 2 projects individually where you can find your favorite Pokémon/videogames by fetching data from a public API and storing that data into a database, added some features like a search bar, pagination, filters and a form to create your personal Pokémon/videogame. Technologies: CSS, React, Redux at front. Express, Sequelize, PostgreSQL, AWS RDS for the database.
- [OmniFood Project](#): My very first website created for client exhibition using UI/UX principles, includes skills of JavaScript with basic HTML & CSS.
- [Post-it project](#): An app made using Nextjs to learn about the benefits of server side rendering(SSR), client side rendering(CSR), Using firebase to store data.
- [Twitter Clone](#): This is a personal project where I used my skills to recreate the popular Twitter application currently X. Using Nextjs as the basis of the project, Tailwind CSS for design and Firebase as a database, adding google authenticator to login and get access to the website features.

EDUCATION

soyHenry

Full stack web developer, 2022 certificate

University Nororiental Gran Mariscal de Ayacucho

software engineer. 2005-2010

Certifications

Google Activate HTML/CSS

Full stack developer
